

Emerging Business

International Logistics & Transportation Professional

Curriculum

Program Outline :

Module 1: Fundamentals of International Logistics & Transportation Professional

- **Supply Chain Management:**

Understanding the end-to-end supply chain, including procurement, production, distribution, and delivery.

- **International Trade and Regulations:**

Familiarity with global trade laws, import/export procedures, and customs regulations.

- **Transportation and Distribution:**

Knowledge of various modes of transportation (sea, air, rail, road) and their optimization.

Module 2: Advanced International Logistics & Transportation Professional

- **Strategic Supply Chain Management:**

Develop advanced strategies to optimize global supply chain operations.

- **Advanced Transportation and Distribution:**

Implement innovative solutions for efficient transportation and distribution across various modes (sea, air, rail, road).

- **Global Trade Compliance and Risk Management:**

Master international trade laws, regulations, and risk management strategies to ensure seamless and compliant logistics operations.

Module 3: Practical Applications

- **Global Supply Chain Coordination**

Develop and implement strategies for coordinating resources, managing inventory, and ensuring seamless operations across international borders.

- **Customs and Trade Compliance:**

Ensure compliance with international trade laws and customs regulations to facilitate smooth import and export processes.

- **Efficient Transportation Planning:**

Optimize transportation routes and modes (sea, air, rail, road) to reduce costs and improve delivery times.

Module 4: Capstone Project

- **Global Supply Chain Analysis:**

Conduct a thorough analysis of the current global supply chain to identify bottlenecks and areas for improvement.

- **Transportation Route Optimization:**

Analyze and optimize transportation routes and modes (sea, air, rail, road) to reduce costs and improve delivery times.

- **Customs and Trade Compliance:**

Develop processes to ensure compliance with international trade laws and customs regulations, minimizing delays and legal risks.

Elective Modules

- **Transport Operations:**

Focus on logistics principles, modes of transport, cost analysis, and handling of dangerous goods

- **Inventory Management:**

Learn about inventory principles, implementation, measurements, and performance metrics.

- **Warehousing:**

Understand warehouse management principles, including storage, handling, and distribution.

- **Global Supply Chains:**

Explore the complexities of global supply chains, including international trade processes and reverse logistics.

- **Sustainable Logistics Practices:**

Implement sustainable practices to minimize environmental impact and promote ethical sourcing.
